**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Dobak, III et al. (US 5758505). Dobak, III et al. disclose a cryoablation system comprising a cryotreatment catheter (figure 35) and a coolant console (inherent) having an inlet line (110) a reservoir of phase change coolant, a supply line (210) for supplying phase change coolant, a first means (130) coupled to the supply line for providing the phase change coolant from the reservoir at elevated pressure along an the inlet line to a the cryotreatment catheter, a second means for recovering the phase change coolant (230) from the cryotreatment catheter and raising its pressure; the first and second means, a portion of the supply line, and the cryotreatment catheter forming a supply loop external to the reservoirs the supply loop (figure 33) passing through the cryotreatment catheter, the first means being arranged in heat exchange communication with the supply line to condition the phase change coolant before it reaches the catheter along the inlet line so as to achieve effective cooling regimens by controlling phase change coolant provided along the inlet line while continuously recovering and recirculating expended coolant from the second means.

***Double Patenting***

Art Unit: 3739

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1 and 2 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1 of U.S. Patent No. 6682525.

Although the conflicting claims are not identical, they are not patentably distinct from each other because all the elements of claims 1 and 2 are to be found in claim 1. The difference between claims 1 and 2 of the application and claim 11 of the patent lies in the fact that the patent claim includes many more elements and is thus much more specific. Thus the invention of claim 1 is in effect a "species" of the "generic" invention of claims 1 and 2. It has been held that the generic invention is "anticipated" by the "species". See *In re Goodman*, 29 USPQ2d 2010 (Fed. Cir. 1993). Since claims 1 and 2 are anticipated by claim 1 of the patent, it is not patentably distinct from claim 1.

Claim 14 is rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 6 of U.S. Patent No. 6383180.

Although the conflicting claims are not identical, they are not patentably distinct from each other because all the elements of claim 14 are to be found in claim 6. The

Art Unit: 3739

difference between claim 14 of the application and claim 6 of the patent lies in the fact that the patent claim includes many more elements and is thus much more specific. Thus the invention of claim 6 is in effect a "species" of the "generic" invention of claim 14. It has been held that the generic invention is "anticipated" by the "species". See *In re Goodman*, 29 USPQ2d 2010 (Fed. Cir. 1993). Since claim 14 is anticipated by claim 6 of the patent, it is not patentably distinct from claim 14.
